1. CHARACTERISTICS

- Metallic elements joint each other, or PVC, wood or another material with metallic materials.
- Self tapping screw ISO 1478
- Previous hole is required.
- F end (except DIN 7981 lead point)
- EPDM steel zinc plated washer version for waterproof unions in fronts and roofs.
- Wide variety in heads, diameters, and lengths for different applications : flexibility in assembly
- Zinc plated or black zinc plated.
- Stainless steel versions available.
- RAL Colored versions
- Cups for hexagon heads available

4.- PREVIOUS HOLE

In order to achieve a correct installation using self tapping screws, a previous hole is required. Chosen from the chart below (UNE 17020):

Thread	Steel or brass sheet thickness				Aluminum sheet thickness					
	[mm]	0.4 - 0.6	0.6 - 1.5	1.5 - 2.5	2.5 - 4.0	0.4 - 0.6	0.6 - 1.0	1.0 - 1.5	1.5 - 2.5	2.5 - 4.0
ST 2.9		2.25	2.40	2.50	—	2.20	2.20	2.25	2.40	—
ST 3.5		2.70	2.80	2.90	3.00	2.70	2.70	2.80	2.80	—
ST 3.9		—	3.10	3.20	3.30	—	3.00	3.00	3.10	3.10
ST 4.2		—	3.30	3.40	3.50	—	3.20	3.20	3.30	3.30
ST 4.8		—	3.80	3.90	4.00	—	3.70	3.70	3.80	3.80
ST 5.5		—	4.40	4.50	4.60	—	4.30	4.30	4.40	4.40
ST 6.3		—	5.10	5.20	5.30	—	5.00	5.00	5.10	5.10

Having a too big hole could ruin base materials thread or a non proper fixation.
Having a too small hole could cause the impossibility of turning the screw, break it or twist base material.

5. SCREW CHARACTERISTIC ENDURANCE*

SIZE	TENSION LOAD [kN]	SHEAR LOAD [kN]
ST 3.5	3.91	2.35
ST 3.9	4.29	2.57
ST 4.2	5.31	3.18
ST 4.8	6.66	3.99
ST 5.5	8.87	5.32
ST 6.3	10.69	6.41

1 kN □ 100 Kg

* Characteristic endurance is the one with a probability over 95% of being exceeded. Depending on the results of the test, dispersion of the breaking loads and the number of test performed.

In tension loads it should be considered the sheet metal own endurance; it will be lower than the screw itself because the screw will ruin the sheet metal joint.

- Zinc Plated (Code AUE)
- Similar geometry DIN 6928, with reinforced washer:
 - Better torque wrench
 - Better distribution of compressive stress over base material.
 - Better opposition to ruin the thread.
 - Suitable with soft base materials with big holes or where a big torque wrench is required.
- General purpose sheet metal-sheet metal joints where very high loads are applied.
- Zinc coated version washer-EPDM $\varnothing 16$ mounted to create a water tightness seal in fronts and roofs (ask technical data sheet ARVUL)

Screwdriver bit code (Phillips drive)	PUPHC02 PUPHL02

- Zinc Plated (TCPZ Code), Black Zinc Plated (TCPN Code) and fully painted in white RAL 9010 (TCPB Code).
- Version in stainless steel class A2 (TCPA2 Code).
- Bevelled head to avoid collisions with mobile parts.
- Use in unions over metal where a head low profile is required (sliding windows, etc.)
- Could substitute blind rivets in many applications with the advantage that this could be disassembled.
- Reduced cone below the head to improve placement over flat surfaces.

Screwdriver bit code (Torx drive)	PUT0020

- Zinc Plated (TFI Code)
- Double thread
- Fixation of aluminum frames over any base material.
- Extra flat head avoids countersunk and ensures a bigger joint surface over the frame.
- All purpose fillet over wood, nylon and metals.
