

## Nail Plug - ND

### Characteristics

- time saving fixing system consisting of plug and nailscrew
- plug is pre-assembled: nailscrew is already pre-installed in plug
- Nailscrew is hammered in, no screw driver needed
- setting locks inside the plug prevent premature expansion during installation
- plug and fixture can easily be removed by turning out the screw

### Advice

Nail plugs may only be installed as through-fixings; the fixture may not be positioned between screw head and plug collar. If installed in hollow base material the plug should be long enough to at least allow for expansion in the second brick chamber.

### Suitability

Base materials:

concrete, solid materials, limited suitability for  
aircrete, hollow blocks, perforated bricks

For fixing of:

tal sheets, battens, cable and pipe clamps, claddings,  
wooden and metal supporting constructions

### Pullout loads in kN\*

	concrete C20/25	solid bricks Mz 12	aircrete P2
ND 5 mm	0,9	0,8	0,2
ND 6 mm	1,3	1,1	0,3
ND 8 mm	1,8	1,7	0,4

\* the loads stated are failure loads valid for general fixings and confirmed strength of the base material indicated. Lower loads apply in case of render, insulating material, non load bearing areas of the base material or too small edge/joint distances. An adequate safety factor should be applied.

### Installation

## Technical Data
